

Fan Unit

Temperature Control Fan System

4 Four-Fan Unit

XLFLOR Air boosted Power Fan Unit is designed to provide a blast of cooling through an individual directional airflow panel. The temperature controlled fan units are available quad fan models. The fan has multiple control options to automatically turn on when conditions require additional cooling. This powerful solution is ideal for solving the toughest hot spots in a data center.

Product characteristics

- A. No maintenance cost
- B. Installation can be carried out by IT staff
- C. Multiple control options for both models available
- D. VN-client sensor network
- E. High Precision , Quick Response to Temperature Measurement
- F. User programmable set point
- G. Viewable Peak Temp for walkthrough check of each rack
- H. Infinitely variable fan speed from 0-100% for precise airflow control
- I. Easily installs into either 24" or 60cm raised floor systems
